Continuation of 11. does NOT place the application in condition for allowance because: Applicant argues that the teaching of Develog does not teach the displacement of the fingers toward each other during their downward movement. The examiner does not agree and applicant is again referred to figures 4 and 5. Figure 4 generally shows the fingers at the top of the load in a vertical position, while figure 5, shows the fingers rotated clockwise from vertical and at a distance from the top of the box. Therefore, it is deemed to meet this limitation. Moreover, the claim as disclosed, require that the fingers move toward one another at some point during the downward movement and not necessarily coinciding with it.
